

iPad Introduction

Home

iPad and iPhone

for beginners and explorers

This site has three parts.

1. *Introduction to the iPad* (below) which supports my hands-on workshops where I cover the topics under *Home, Main Apps, Settings* and *Apps & Media*.

This hands-on workshop is designed for small groups of people who are learning the basics of what an iPad can do. There is a detailed website that accompanies the sessions that allows participants to do homework between the sessions and afterwards.

Participants only need to be familiar with the very basic skills of using an iPad.

Topics

Controls, switches etc
Organising apps
Safari
Calendar and Contacts
Notes and Pages
Settings
iCloud
Backup

Password security
App Store
Music - streaming
Photos - editing, organising
eBooks and newspapers
Podcasts
Getting help

Up to Date?

If you attend, it is useful to have the latest software installed for your model iPad. To check, go to *Settings*, then *General*, then on the right, Software Update and you will be told if you have the latest. If not, plug your iPad into the power supply and follow the instructions.
