

# HOW TO DESTROY THE AUDIO IN A PRESENTATION

The upstairs of the Box Factory has 3 VERY NOISY exhaust fans.

See pictures below

Not only do they make a dreadful noise, but they DO ABSOLUTELY NO GOOD WHATSOEVER!!!  
(Well, maybe they help expel hot air for the first 5 minutes, but after that they are useless.)

The lesson is:

**Never have them running during a presentation!**

## The right switch

Turn off the bottom LH switch (see yellow circle!)

P.S. The Blinds switch does nothing either.

The switch for the air conditioner is in the kitchen. So turn it on, open the back doors to allow breeze flow-through, and enjoy presentations without noisy, useless sound pollution.
